

Founded in 1847, El Puerto de Liverpool (EPL), S.A.B de C.V. has been part of Mexicans' lives for over **175 years** and aims to continue contributing to a more sustainable world for present and future generations. That's why we announce that, as of the end of 2022, **we have 27 locations** with environmental certification issued by government entities such as **the Ministry of Environment of Mexico City and the State Attorney General's Office for Environmental Protection of Veracruz**.

The certification programs of these agencies **aim to enhance the environmental performance of locations to protect natural resources and the environment**, ensuring compliance with current environmental legislation through a methodological examination by third parties of our activities, operations, and processes

With the above, we achieve a total of 578,041.52 square meters certified, meeting the highest environmental standards required by authorities, thereby promoting benefits across different environmental areas such as reducing emissions into the atmosphere, decreasing potable water consumption, and promoting waste recycling at our locations. This requires us to operate more efficiently every day.

The actions we take align with our Sustainability strategy that aims to get a better future

El Puerto de Liverpool®
